FAMILY AFFAIRS

GlassY does not want to be a large family. We are deliberately keeping the range small and compact, while still offering the whole wide variety of glasses.
Less is more - the **Friendly** range is produced by machines

The hectic pace of everyday use in the restaurant and hospitality sector means that glasses have to be capable of withstanding this level of use. Glasses from the Friendly series can usually be taken straight from the dishwasher to the table, without any drying or polishing being necessary. And what is more: even in the especially critical situation when the glass is still warm from the machine and particularly susceptible to stress, these glasses are extremely breakage resistant – even if they are knocked over while upside down (base up)!

QUALITY FEATURES FRIENDLY

- 1 mouth rim:** Cold cracked off, triple grinding (inside, outside, top) fire-polished, no rolled rim - which is uneasthetic and unhygienic for use in hospitality business. Thin wall thickness which is highly appreciated by wine connoisseurs, wall thickness is however strong enough to give the glass the necessary resistance for the daily use, excellent pendulum test results.
- 2. bowl part:** Highest brilliance, purest glass quality - no mould marks, no blisters, excellent scratch resistance and shatter proof resistance achieved by a special hardening process, no glass corrosion in case of appropriate handling.
- 3. transition from bowl part to stem:** Special fire polishing process which guarantees a smooth transition.
- 4. stem:** No mould marks, no seem lines. Elegant design resulting in a very balanced weight distribution. Stem height is a symbiosis between elegance and daily utility. Thus the glass is appropriate to be cleaned in dishwashers.
- 5. transition from stem to foot plate:** Pulled execution which guarantees a perfect transition, mostly glasses are held with the hands in this area and the consumer feels only this very smooth and soft curve. No shear marks!
- 6. foot plate:** GlassY logo laser etched - elegant but not dominating. Small thickness of foot plate which gives the plate an elegant outlook and guarantees a firm standing. On the outside rim of the foot plate no seamlines.
